

Twice the supply,
One third the maintenance

Four roll dispensers can save up to 20%

For normal washroom traffic needs, two-roll systems are fine, but in high usage situations you need the supply and service advantages that a four roll Tissue System can deliver. They can give you twice the supply and one-third the maintenance over two-roll tissue systems.

The double supply of tissue reduces the chances of tissue run out and user complaints. It dramatically reduces the time-consuming refill and maintenance obligations. Since four roll tissue systems require only one-third the service/labour, they also free your maintenance personnel up to perform other duties.

A four roll system will save you close to 20% over jumbo rolls. Jumbo rolls may be suitable for stadiums or like facilities, but they are not your most economical choice for constant, high usage situations. The unused stub roll created when maintenance tries to prevent run out situations is only one case of waste....the unperfected tissue of jumbo rolls can also lead to wasted tissue.

On the other hand, the perfect tissue supply in a four roll system helps control usage more efficiently. Each roll is used completely (no stub roll waste).
